## Strapping Machines

[www.saizarsl.com](http://www.saizarsl.com)

The head has a hydraulic element to pull the strap. This means that the strap can be tightened to the pressure chosen by the customer (right up to breaking the strap if necessary). SAIZAR heads are standard and we work with these type of heads for steel and polyester strapping.

#### Heads for steel strapping Heads:

- \* CASA 16-19.
- \* CASA 25-32

#### Heads for polyester strapping Heads:

- \* CASP 16-19.
- \* CASP 25-32

#### Steel & Polyester strapping Heads:

- \* CASAP 16-19
- \* CASAP 25-32

Our jaw takes care of the process to hold, cut and staple or sealing the strap which is done right on the strap without any type of cartridge. We can also provide the following services for our customers:

- 2 years free of charge quarterly maintenance monitoring free of charge

- Training for the company's workers

- We are available for consultation and can supply all types of spare parts for strapping machines within 3 days.

All our strapping machines are delivered to their corresponding destinations ready to operate.

All our strapping machines run the whole process automatically and they are capable of strapping a package in barely 14 seconds. They all have the corresponding international patent.

We take care of everything: Technical support service of any type of strapping machines, spare parts supply, strap supply, and training in their operation.

At SAIZAR, we also repair and maintain all types of automatic, semi-automatic and manual strapping machines for polyester and steel strapping.

We repair all types of automatic, semi-automatic and manual strapping machines for polyester and steel strapping, made by Signode, Titán, Orgapack, Sundbirsta, Cyklop, Columbia, Fromm, Centaur, etc.

Our service policy bypasses the normal situation when requesting a spare part from the official strapping machine manufacturer can take up to 30 days to arrive, leaving the customers to do what they can to strap their packages, coils, etc. Our service is the fastest being possible to solve all the problems of the customer just with one call. We promise to supply all types of spare parts for strapping machines within 3 days.

To avoid being dependent on one specific strap, SAIZAR modifies heads made by Signode, Titán, Orgapack, Sundbirsta, Fromm, etc. to be able to strap using any type of steel or polyester strap.

Several of our customers have already made great savings by introducing a more economical tempered strap made by other companies or by making the strap themselves.

FLEJADORAS SAIZAR guarantees and promises to be able to adapt any automatic strapping machine to any steel or polyester strap.

SAIZAR is able to adapt any automatic steel strapping machine to be able to do the strapping with polyester.

We offer to the customer the possibility of doing a study, without any compromise, explaining the savings and benefits he can obtain substituting the steel strapping for the polyester strapping one:

- Saving of 50-60% in the strap, cause is cheaper.

- The polyester has a greater elongation but less breaking load respects to the steel, it can equate using a strap with greater thickness.

- 50-60% savings in the head, spare parts, manpower.

- Greater security for the operator (not cuts, no accidents) using polyester than using steel.

- The polyester does not rust, and can be outsider without any risk.

SAIZAR, gives official courses of training in the management of the strapping machines they use in their plant. These courses are useful to train machine operators, mechanics and electricians, broadening their knowledge and increasing efficiency levels.

If you want to find out what we can do for your company, you'll find us at [www.saizarsl.com](http://www.saizarsl.com)

If you require more information please contact us at [talleres@saizar.com](mailto:talleres@saizar.com) or phone + 34 943 675 068 and we will be delighted to answer your questions.

All our strapping machines can be adapted to any customers's needs regarding measurements, requirements, features, etc.

## We manufacture strapping lines

We make automatic strapping machines for 16, 19, 25 and 32 mm steel and polyester strapping.

Each of our strapping machines can strap packages, coils, etc. with steel and with polyester. With using the head CASAP, can strap with steel and polyester simultaneously.

SAIZAR strapping machines can work with any type of steel strap. It can work equally well with straps from different brands such as Cyklop, Signode, Titan, Fromm, etc.

*These days it is fundamental to save money in any part of your company's production process from buying the raw material to final despatch. That's why we are offering our services.*

We are a global operator that can solve any problems of the strapping machines of your company, because at SAIZAR we specialise in manufacturing, repairing and maintaining all types of automatic, semiautomatic, pneumatic and manual strapping machines using steel and polyester straps.
